THIS INFORMATION IS FROM THE WOFAC IMAGERY ANALYSIS DIVISION:

1. THE ORIGINAL CRATER NEAR LAUNCH COMPLEX A, SHUANG-CHENG-TZU MISSILE TEST CENTER, CHINA, HAS A DIAMETER OF 70 FEET AND A [REDACTED] ITS APPARENT EARTH SHOCK DISTURBANCE IS APPROXIMATELY [REDACTED]

2. THE SECOND CRATER IS 80 FEET IN DIAMETER AND 30 FEET DEEP WITH AN APPARENT EARTH SHOCK DISTURBANCE [REDACTED] THESE "DISH-SHAPED" CRATERS WERE PROBABLY THE RESULT OF MISSILE MALFUNCTIONS.

3. THE CRATER DIAMETERS WERE DETERMINED ALONG THE ORIGINAL GROUND SURFACE AND THE DEPTHS WERE MEASURED FROM THIS POINT TO THE FALL BACK. BECAUSE OF THIS, THESE FIGURES REFLECT THE SIZING OF THE APPARENT RATHER THAN THE TRUE CRATERS. ALL DIMENSIONS ARE CONSIDERED TO BE ACCURATE WITHIN 5 FEET OR 5 PERCENT WHICHEVER IS GREATER.

4. AN ASSESSMENT OF THE UNIDENTIFIED OBJECTS EAST OF THE SECOND CRATER CANNOT ACCURATELY BE MADE ALTHOUGH THESE MAY BE SMALL CRATERS.
